

**BondEvalue, the New-Age Fintech Company
Achieves Seamless Endpoint, Asset, and
Patch Management With SanerNow**

About BondEvalue

BondEvalue is a Singapore-based fintech company that launched the world's first fractional bond exchange. They are one of the major brokerages in the Asian market, offering instant access to bond trading. BondEvalue also has a global information services business that provides bond market data and news to investors via mobile, web, and API.

Scope of Implementation

SanerNow Applications Implemented

Asset Management, Endpoint Management, Patch Management

Challenges

Difficulties in remote IT management starting from maintaining system health, deploying software and patches, to troubleshooting devices.

Manish Madan Mohan, the Chief Information Security Officer (CISO) at BondEvalue, said his organization faced challenges in everyday endpoint management and patching. The security team was not able to monitor their software and hardware inventory in real-time. They had an array of difficulties in endpoint management, ranging from maintaining system health, deploying software, to remote troubleshooting. Patching multiple OSs at the same time was one of the biggest troubles.

The security team had a manual patch discovery and assessment process where they looked for critical patches and asked the employees to patch them. These dependencies made it difficult to ensure 100% patch compliance.

Business Needs

An affordable and scalable solution to remotely perform all endpoint security, monitoring, and management tasks.

BondEvalue is an organization that majorly works with individual and remote endpoints without an Active Directory server. They were looking for a solution that could help them perform all endpoint security monitoring and execution actions remotely. At the same time, they didn't want to compromise on the efficiency of the solution.

SanerNow solving all endpoint management and patching woes

Manish led the evaluation process and implemented SanerNow in their environment. For implementation, an agent installation was all that was needed. The web console made their lives easier by centralizing the information gathered from each endpoint. SanerNow tech team was always there to help make sure their deployment objectives

were met. When asked why SecPod's SanerNow was the best fit for their organization, Manish said,

"SanerNow is more affordable than other alternatives, and it has more comprehensive features/controls than other tools. The technical support was simply way better than other solutions in the market."

According to the CISO of BondEvalue, their organization now benefits from:

- Realtime monitoring and management of IT Assets
- Easy and effective management of endpoints
- Maintaining system health and troubleshooting endpoint issues
- Seamless patching for all OSs and third-party applications
- Timely patch support for critical security updates
- Deploying software using an in-built software repository
- Single-server, single-agent approach for executing all tasks

"Having worked in Information Security for the last 14 years I would say that this is one of the best products when it comes to Patch Management. If you are looking for seamless and painless endpoint management, then SanerNow is the right product to choose. Be it asset management or patch management, SanerNow comes out on top in every factor."

- Manish Madan Mohan, CISO, BondEvalue

About SecPod

SecPod is leading provider of endpoint security and management solutions. SecPod (Security Podium, incarnated as SecPod) has created the revolutionary SanerNow Cyberhygiene Platform and tools that are used by MSPs and enterprises worldwide. SecPod also licenses security technology to top security vendors through its SCAP Content Professional Feed.
