It specializes in journalism, entertainment, media, marketplaces, radio, newspaper, magazine, social media, digital publishing, e-commerce, online TV, and more.

Scope of Implementation

Applications Used

SanerNow PM

Challenges and business requirements for patching Linux and third party applications

Suvi Silvestor, System Engineer at Ringier AG, is responsible for Linux patching at Ringier AG. He makes sure all Linux systems are up-to-date and free from risk. The lack of a comprehensive patching tool forced them to find workarounds and patch manually. Even after trying many patching solutions, Ringier AG didn't find a patching tool that supported a wide range of Linux distributions in their environment.

Ringier AG's main criteria for a patching tool was support for a wide collection of Linux OS versions, a user-friendly UI, agent-based architecture, and a cloud-based console. After evaluating numerous solutions for patching Linux Devices, Ringier AG found the right solution with SanerNow.

SanerNow seamlessly handles patching for an extensive range of Linux flavors at Ringier AG

Ringier AG took SanerNow PM for a spin and performed a detailed evaluation. They realized the number of OS versions supported by SanerNow PM was beyond their expectations. SanerNow PM was deployed in their environment.

Suvi mentioned that the deployment of SanerNow PM was quite easy and straightforward. He didn't need any help from SecPod's support team for onboarding due to the simplicity of the process.

After implementing SanerNow PM, Ringier AG patches multiple Linux systems like Debian, CentOS, Ubuntu, and more, faster and easier than before. They use one application to patch all their Linux OSs and third-party apps. Automated patch deployment, quick support for latest updates, easy to schedule scans, and rollback made SanerNow a truly comprehensive solution.

"Updating Linux servers with a specific patch used to take about 1 week, now it takes a few hours."

"The support of many Linux versions was the main reason why we moved to SanerNow. It's the only product we found for companies with many OSs including support for all the Linux OSs. It was user-friendly, easy to learn, and not complicated like other products. We are happily patching everything in Linux devices with SanerNow."

- Suvi Silvestor, System Engineer at Ringier AG

Suvi mentioned that Ringier AG will definitely evaluate more applications on the SanerNow Cyberhygiene Platform as they scale up implementation.

About SecPod

SecPod is leading provider of endpoint security and management solutions. SecPod (Security Podium, incarnated as SecPod) has created the revolutionary SanerNow Cyberhygiene Platform and tools that are used by MSPs and enterprises worldwide. SecPod also licenses security technology to top security vendors through its SCAP Content Professional Feed.
